DETAILED ACTION

Allowable Subject Matter

Claims 1 – 7 and 9 – 15 are allowed.

The following is an examiner's statement of reasons for allowance:

Regarding claim 1, the cited prior art neither teach nor fairly suggest a sample cell comprising a glass body including a gas inlet, a gas outlet and at least one orifice formed by a tubular portion of the glass body; and a plane glass body closing the orifice, wherein the shape and size of the window corresponds to the shape and size of the orifice, and the glass window being joined at its outer rim to the interior surface of the tubular portion by a fused joint, and the tubular portion projects outwardly beyond an outer face of the glass window to accommodate an axially outer portion of the fused joint that projects outwardly beyond the outer face of the glass window.

Regarding claim 10, the cited prior art neither teach nor fairly suggest a method of producing a sample cell comprising the steps of: inserting a plane glass window into an orifice of a glass body that further has an inlet and an outlet, the circumference of the window corresponding to the circumference of the orifice and the orifice being formed by a tubular portion of the glass body; and heating the tubular portion from the exterior at least twice in such a way that the glass in the vicinity of the tubular portion melts, creating a fused joint between the window at its rim and the tubular portion, wherein the window is positioned in the tubular portion such that a portion of the tubular portion projects outwardly beyond an outer face of the window to accommodate an axially outer portion of the fused joint that projects outwardly beyond the outer face of the glass window.
